EDUCATION

Oregon State University

Corvallis, OR

Bachelor of Science in Computer Science | GPA: 4.0

Sep 2025 - Dec 2027 (expected)

- Relevant Courses: Discrete Structures, Data Structures, Computer Architecture & Assembly Language, Web Development

TECHNICAL EXPERIENCE

Amazon Ads

Santa Monica, CA

Software Development Engineer Apprentice

Oct 2022 - Mar 2024

Developed production measurement systems across Amazon Ads Marketing Mix Modeling and Omnichannel Metrics teams.

- Enabled the launch of a new advertising metric by building and maintaining serverless pipelines processing millions of records daily across petabyte-scale datasets using AWS Lambda, SQS, S3, and CDK.
- Increased test coverage from below 60% to over 80% across 5+ production services by refactoring tightly coupled Java and TypeScript components and adding unit tests for 8,000+ previously untested lines of code.
- Reduced friction and extended functionality for users by partnering with product and UI/UX teams to enhance TypeScript front-end workflows.
- Implemented monitoring, automated deployment validation, and release safeguards in CI/CD pipelines to improve production reliability.

Amazon Technical Academy (ATA)

Lake Wales, FL (Remote)

SDE Trainee

Feb 2022 - Oct 2022

Highly selective paid internal training program for Amazon employees to transition into software development engineering roles.

- Trained in Java, data structures, algorithms, distributed systems, object-oriented design, and software engineering best practices through a full-time 9-month curriculum.
- Applied software engineering practices modeled after Amazon development processes through hands-on projects using object-oriented design, testing, and AWS services.

ADDITIONAL EXPERIENCE

Oregon State University

Los Angeles, CA (Remote)

Undergraduate Learning Assistant

Mar 2026 - Present

CS 225: Discrete Structures in Computer Science

- Mentored 100+ students in discrete logic, proof techniques, and set theory, breaking down complex mathematical concepts during weekly virtual office hours and through discussion boards.
- Evaluated discrete mathematics assignments and provided actionable feedback on students' logic, proof structure, and solution approaches.

PROJECTS

Drop in Chess | Java, Spring Boot, React, TypeScript, REST APIs

- Built a full-stack chess application with a server-authoritative Spring Boot backend for game-state management and move validation, paired with a responsive React/TypeScript client for interactive play.
- Engineered an offline Java pipeline to stream and replay 312 MB of Lichess Elite PGN data, classify candidate positions, and generate a curated dataset of 1,000 unique middlegame and endgame positions.
- Integrated Stockfish through the UCI protocol to evaluate candidate positions, filter terminal states and large evaluation imbalances, and deduplicate positions before exporting validated runtime data.
- Built an OpenAI API enrichment pipeline that generates strategic context for each position, including preceding play, the current positional landscape, and potential plans for both side

Devfolio Website | Next.js 15, TypeScript, Tailwind CSS, Framer Motion

- Built and deployed a responsive project catalog with interactive demos, source links, and technical details.
- Implemented secure backend data storage with Supabase to persist contact form submissions and visitor messages.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript/TypeScript, SQL, C++, HTML/CSS

Frameworks & Tools: Spring Boot, Spring MVC, React, Next.js, AWS, Docker, Git, PostgreSQL, Linux, OpenAI Codex

Concepts: REST APIs, CI/CD, Distributed Systems, Object-Oriented Design, Unit & Integration Testing
